PRODUCT DATASHEET

SPIDER DRILLSHIELD

PART NUMBER: 55P-ACC-DRILLSHIELD-038

DESCRIPTION

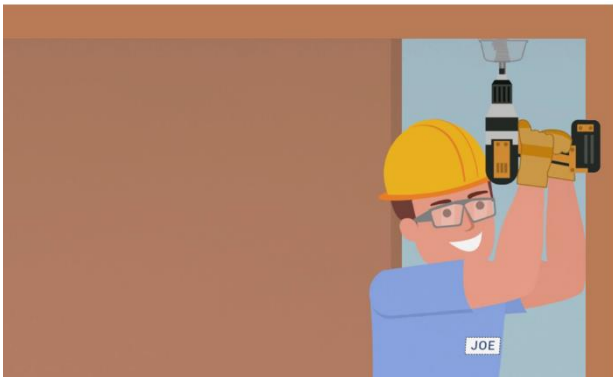

The Spider Drill Shield is the best way to drill metal door frames for Door Contact Sensors!

Especially when used in conjunction with our Spider Step Bits*

- A rugged 3/8" core high-temp ball bearing assembly effortlessly guides your high-speed drill bit shanks. (Shanks must be .75" length)
- Tough yet flexible 3.5" diameter cup will adjust throughout the drilling process, capturing nearly all debris.
- Heat-resistive rubber can dissipate temperatures quickly, which helps to elongate tool life.
- Translucent 'see-through' design provides the installer visual capability to stay on point to their target pilot mark.

Solve these major problems... and then some!

- **Help Prevent Worker Injuries!** Stops most razor-sharp shavings in their tracks from flying towards the installer's face, hair, eyes, and clothing.
- **Avoids Heat Hazards!** Metal shrapnel can be DANGEROUSLY HOT. This will catch nearly all of it. Minimize the chance of skin burns & fires!
- **Catch it right away if your drill bit starts 'walking'.** You can keep a closer eye now. No need to look away!
- **Cleanup Time Eliminated!** With the Spider Drill Shield, there won't be a need to sweep up or vacuum the 100's of tiny door shrapnel that ends up stuck into the carpet at the end of a drilling job. Just find the nearest garbage bin & tip the Drill Shield over!

*Step Bit and
Drill not
included
